G1E.UEUT

with edge protection chamfer

Product overview

HPC end mills „Made in Germany“, four teeth, with edge protection chamfer and great depths enables a high performance cutting. The economy series unites good holding times with fair prices. The end mills are suitable for slot milling, finish milling, rough milling, trochoidal milling, peripheral milling and ramp milling up to 2,5°. High metal removal capabilities as well as high cutting and feed rates mark this tool. Suitable for steels up to 52 HRC.

Technical features

Cylindrical stepped version.

Attention: Only use with Weldon clamping chuck or other clamping chucks with high clamping force.

Available in the following dimensions:

Product overview

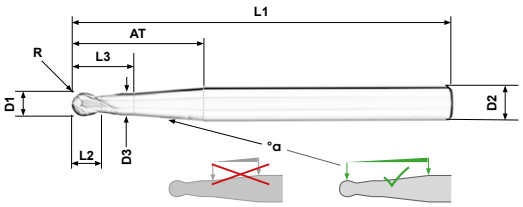
This eco ballnose cutter is a versatile precision tool. The areas of application are profile milling, pre-finishing and finishing of 3-D contours and rest machining. The surfaces left behind are in a high dimensional accuracy. Suitable for unalloyed steels, tempered tool steels and hardened steels <56 HRC.
By using this tool many applications and adaptations can be optimized and standardized.



Available in the following dimensions:

<65HRC	<58HRC	<56HRC	<52HRC	<48HRC	1.400N	1.000N	Steel	CrNi	Titan	INC	GG	GjV	ALU	AlSi	Cu	GRAPH	GFK

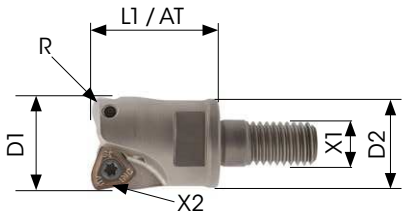
D1 = Tool diameter
R = Radius
D2 = Connector collar-diameter
X1 = Interface to holder
AT = Working depth
L1 = Total length
Z = Number of cutting edges
X2 = Type of indexable insert



Technical Features

Cutter for large working depth and soft cutting. The polygonal cutting edge ensures optimal load distribution under adverse conditions. The AURA® TriHF-system enables manless work and high process safety also at adverse clamping, interrupted cuts and thin walled bars. Even machining a vertical wall directly generates hardly any vibration.

Available in the following dimensions:

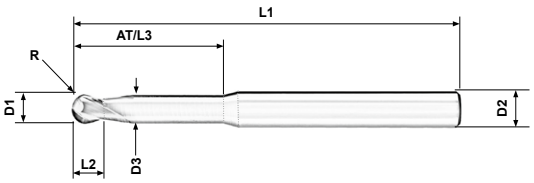
Product overview

This eco ballnose cutter is a versatile precision tool. The areas of application are profile milling, pre-finishing an finishing of 3-D contours and rest machining. The surfaces left behind are in a high dimensional accuracy. Suitable for unalloyed steels, tempered tool steels and hardened steels <56 HRC.
By using this tool many applications and adaptations can be optimized and standardized.



Available in the following dimensions:

<65HRC	<58HRC	<56HRC	<52HRC	<48HRC	1.400N	1.000N	Steel	CrNi	Titan	INC	GG	GjV	ALU	AlSi	Cu	GRAPH	GFK
